## LIVE THE DREAM

We specialize in working with those who are disabled (i.e. the blind, low vision, paraplegic, quadriplegic, seniors, those who have carpal tunnel, learning disabilities or have hand & finger dexterity issues), giving them a greater independence in life and to become more productive. We work with businesses, agencies and as an advocate for your clients. we provide onsite support, training, trouble shooting, and assessments. We build our own desktop and laptop computers, through the means of adaptive technology, stand alone hardware and custom built computer systems. For more information contact us by phone, e-mail or access our website:

## Mission Statement

**WisdomWare uses the latest adaptive technology to assist those who have disability become producers in the real game of life.**

Because of adaptive technology education, careers and so much more can be attained.

- WisdomWare aims to help educate agencies, businesses and individuals about adaptive and assistive technology.
- We strive to research and provide the right tool for the job.
- We wish to make a difference for those of us that are disabled on the Internet and beyond. We desire to be a part of helping you to succeed in all areas of life.

We hope to network with like-minded agencies & nonprofit organizations and other partners in order to help improve communication, coordination, and opportunities for persons with disabilities.

### **EXTENSIVE TRAINING AVAILABLE**

We offer training to individuals, agencies, and businesses. We can train one-on-one or in groups on all software and hardware (including all Windows versions) that we offer. Detailed help is given to take the pain out of maintaining your computer systems, by showing you how your operating system works in the background along with our software.

Instruction is individualized to a persons learning level and disability:

### **Blind or of low-vision**

**We focus on keystrokes for every application that you use:** Did you know that there is a key stroke preset within windows for every function, and you can get around faster than using a mouse?

### **Bodily disabilities**

**Quadriplegic, paraplegic, multiple sclerosis, poor hand or finger dexterity & arthritis, etc.** We focus on a combination of key strokes and voice commands along with Scan Soft programs.

### **Learning disabilities**

**Since there are many learning disabilities, we can find the method that works best.** We show you how to understand the information by seeing and hearing at the same time along with our voice enabled software programs.

**We also can take out the bells and whistles that disabled people don't need, making your computer run faster, and easier to use.**
